Wednesday, December 21, 2005		Scale		Sheet	1 of 5

Rev0

- Original Rev for Memco
- Took T3-8I8O design rev14 and reworked it for PWM project

Rev1

- Done: fix mux select lines
- Done: require a TXEN line for RS485 com, pin3.2
- Done: remove 470 current limiting resistors
- Done: flip D33
- Done: output feedback to pic should come from 5V side of OPamp
- Done: One pin of each "hand" potentiometer must be tied to GND.
- Done: Each "hand" potentiometer must be tied to 12V not 5V
- Done: Connect analog GND to INPUT page
- Done: update footprint of packet resistors
- Done: R18 and R22 to move for cpu socket
- Done: Outputs out of order on PCB
- Done: Make sure all thru-holes have thermal relief
- Done: move D33 to make space for pic socket
- Done: crystal footprint updated
- Done: move IN_CPU2 to Port0 given the internal pull-ups may affect Analog input reads
- Done: remove pull up on P0 lines

Rev2

- Done: added diode to decrease 5V line for 485 module, it would overheat otherwise
- Done: timing cap for power chip changed to 120pF to reduce noise
- Done: changed jumper select to switches
- Done: changed the resistance for power to 1.89 and 5.96 for the 5V supply

Rev3

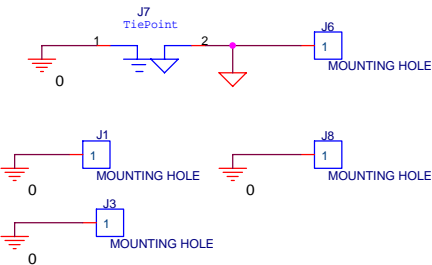

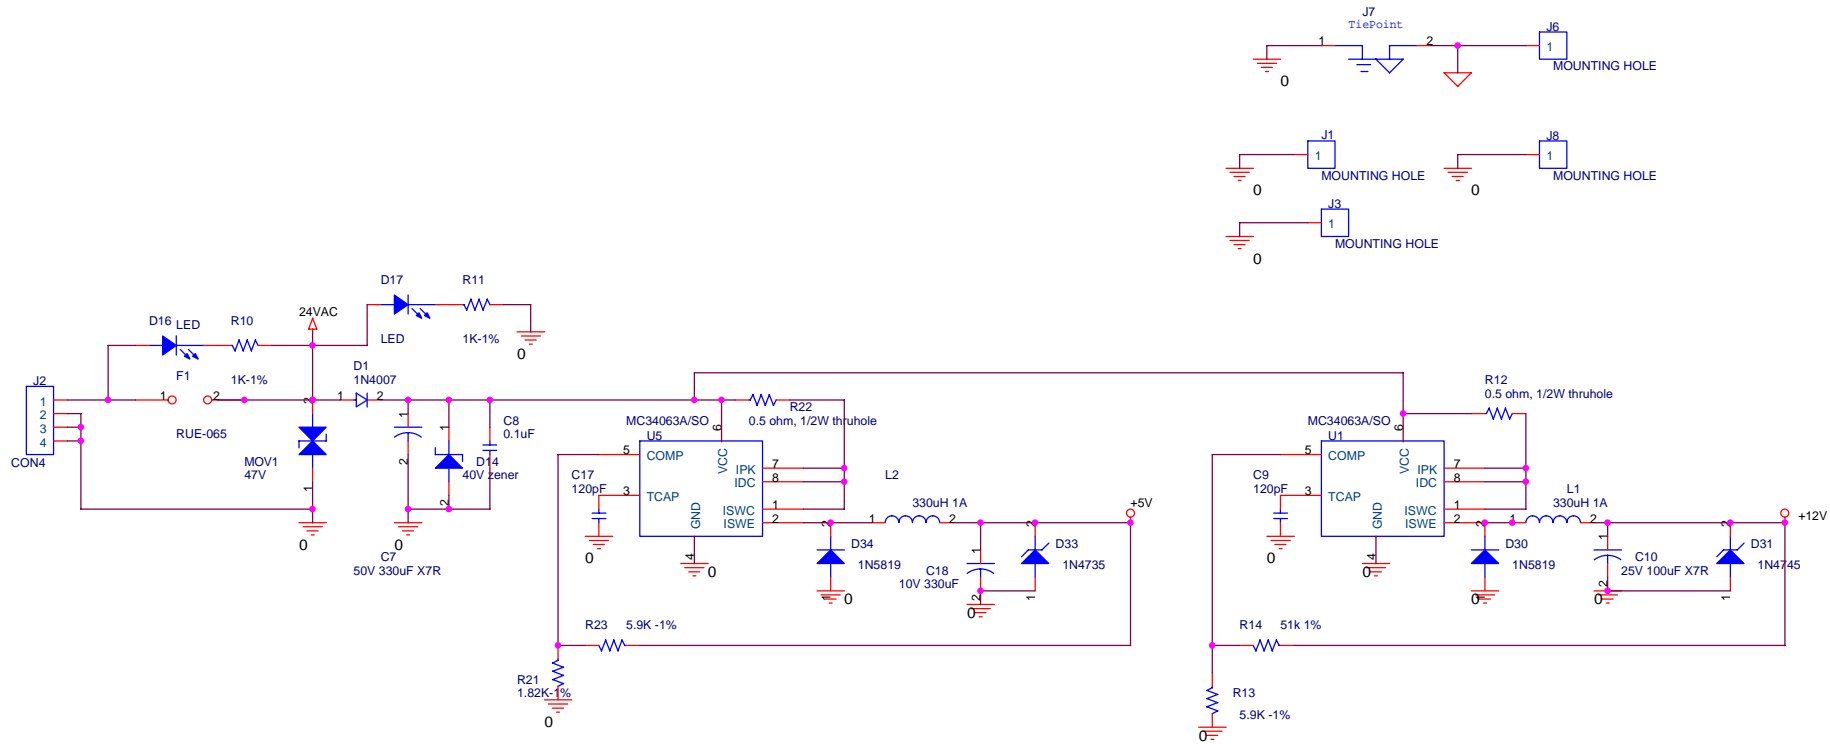

- Done: rectify connection with Input Con. Was mis-labelled
- Done: change cap by op-amp to 10uF. 100uF too slow
- Done: fix footprint of switches

TBD: rectify footprint names of 2N2222, Q1, Q2 for BOM purposes

[Slick Screen on Board was mislabelled. Still reads Rev2](#)
[note: make sure muxes are phillips brand. Does not work with Texas chips](#)
